

NEBRASKA - HEALTHY SCHOOLS LOCAL EDUCATION AGENCIES

2020 School Health Profiles Report Survey Summary

The School Health Profiles (Profiles) assists state and local education and health agencies in monitoring and assessing characteristics of school health education; physical education and physical activity; practices related to bullying and sexual harassment; school health policies related to tobacco-use prevention and nutrition; school-based health services; family engagement and community involvement; and school health coordination. Data from Profiles can be used to improve school health programs.

Two questionnaires are used to collect data – one for school principals and one for lead health education teachers. The two questionnaires were administered online to 17 schools containing any of grades 6 through 12 in Healthy Schools targeted LEAs in Nebraska during spring 2020. Usable questionnaires were received from principals in 82% of schools and from lead health education teachers in 82% of schools. Because the response rates for these surveys were greater than or equal to 70%, the results are weighted and are representative of all schools in Nebraska Healthy Schools targeted LEAs having at least one of grades 6 through 12. Results from the principal and lead health education teacher surveys are presented for the following types of schools in Nebraska Healthy Schools targeted LEAs:

- High schools with a low grade of 9 or higher and a high grade of 10 or higher;
- Middle schools with a high grade of 9 or lower;
- Junior/senior high schools with a low grade of 8 or lower and a high grade of 10 or higher; and
- All schools.

The Profiles questionnaires were developed by the Division of Adolescent and School Health, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, Centers for Disease Control and Prevention in collaboration with representatives of state, local, and territorial departments of health and education.
